(60) Provisional application No. 62/113,911, filed on Feb.  
9, 2015.

An antler shed attachment device is disclosed. The device includes a main strap and a plurality of loops including a clasp member. The clasp member allows for the attachment of shed antlers and the loops allow for movement along the main strap. Accordingly, a user is able to easily retain sheds within the clasp and along the strap for easy carrying.
